

Project Charter

Product Cannibalization & Demand Shift Analysis System

Version 1.0

Prepared by: Harish Chavan

1. Project Purpose

To build a Business Analytics system that identifies whether new product launches are cannibalizing sales of existing products, so management can make evidence-based decisions on pricing, launches, inventory, and marketing.

2. Objective

Detect and measure product cannibalization using historical sales data, and present findings through an interactive Interactive HTML/JS Dashboard supported by Python-based analysis.

3. Project Creator

Role	Name / Responsibility
Business Analytics Student / Analyst	Harish Chavan
Academic / Portfolio Reference	Self-Directed Project
Portfolio Reviewer	Hiring Manager / Recruiter

4. Scope Summary

In scope: Sales, Customer, Revenue, and Launch analysis; Cannibalization Detection; Dashboard Visualization; EDA; KPI Generation; Forecast-ready Dataset; Business Recommendations.

Out of scope: Real-time Streaming, ERP Integration, Machine Learning Prediction, Automatic Pricing Engine, Supplier Management, Mobile Application.

5. Milestones & Timeline

Phase	Milestone	Indicative Duration
1	Data collection & cleaning	Day 1
2	Exploratory Data Analysis (EDA)	Day 2
3	Feature engineering & KPI calculation	Day 3
4	Cannibalization analysis	Day 4
5	Interactive HTML/JS Dashboard build	Day 5
6	Validation & business recommendations	Day 6
7	Final documentation & presentation	Day 7

6. Deliverables

- Clean Dataset
- EDA Report
- Python Notebook
- Interactive HTML/JS Dashboard
- Business Insights Report
- Project Documentation
- Presentation

7. Key Risks

- Incorrect or missing launch dates could distort before/after comparisons.
- Missing sales records may bias cannibalization calculations.
- Poor data quality may require additional cleaning time.
- Seasonality effects may be mistaken for cannibalization.
- Pricing anomalies could skew price-impact analysis.

8. Success Criteria

- Cannibalized products are correctly identified.
- Cannibalization percentage is calculated accurately.
- Dashboards are actionable and easy to navigate.
- Management can use outputs to make product decisions.
- Wrong business assumptions about growth are reduced.

9. Constraints & Assumptions

Constraints

- Limited historical data.
- No live database.
- Offline analysis.
- Single dataset.

Assumptions

- Historical data is available.
- Launch dates are accurate.
- Sales data is reliable.
- Products belong to known categories.

10. Project Status

Name	Role	Status	Date
